

NPFL006 Introduction to Formal Linguistics – homework 5

- assigned December 17, 2021, due ***January 5*, 2022**
- please send your answers to `sevcikova@ufal.mff.cuni.cz`
- max. 8 points in total (2 points for each syntactic graph)

For each of the following sentences

- Romeo defended his honor bravely.*
- The girl Romeo loved so much was very young.*

(1) draw a syntactic graph according to the approach of either Universal Conceptual Cognitive Annotation (UCCA), or Abstract Meaning Representation (AMR),

(2) and another syntactic graph following one of the frameworks discussed in the NPFL006 course earlier this term (Functional Generative Description, Meaning-Text Theory, Paninian syntax, basic constituency trees, X-bar, Minimalism, also Penn Treebank or PropBank style).

Specify which approach you are applying; with multi-leveled approaches also, which of the levels you are working on.

Please be ready to justify your annotation decisions in a discussion within the lecture on January 6.

If you cannot attend the lecture, please provide a short comment on each of the graphs (including discarded options or doubts, if any).
